

Automatic hand dispenser with infrared technology

A touch free automatic hand dispenser to help prevent the spread of bacteria and cross infection. Measured dosage with no wastage and no drips and easy to refill.

Suitable to use in areas where soap and water are not readily available and in areas where there is a need for high level of hand sanitisation.

bsafe™ is a family of products developed to keep you safe. We are a Yorkshire based family business with over 40 years of experience in the environmental sector and bsafe™ complements our safety range of products. Our customers remain our number one priority and by purchasing a bsafe™ product you will be protected.

Features

- Automatic infrared sensor technology
- Touchless
- Measured dosage
- Fine Spray
- No need to dry
- Runs on batteries no power supply required

Benefits

A highly sensitive infrared sensor automatically detects hands and provides a touchless measured dose of sanitiser.

The fine spray provides a good coverage area on the hands allowing for a quick and easy application.

Each dose delivered is 0.8ml and with a capacity of 1000ml each refill cartridge will provide 1250 doses. It is recommended for use with bsafe™ alcohol or alcohol-free 1000ml sanitiser refills.

It is easily wall mountable on flat surfaces and makes it ideal for a range of facilities. The space saving dispenser can also be mounted on bsafe™ free standing unit and placed at entrances in high traffic areas.

The unit has an on / off switch which can be used to prolong the use of the batteries e.g. switched off over weekends in offices. The easy opening via a key makes refilling fast with no spills.

Areas of use

Businesses - Office spaces, factories
Sports facilities - Gyms, Sports Centres, Swimming pools, Dance Studios
Hotels, Restaurants, Cafes, Pubs, Bars
Retail Stores
Schools and Nurseries
